Education

UBDT College of Engineering, Davanagere (VTU) Aug 2023 – May 2027
B.E. in Computer Science and Engineering; CGPA: 8.8/10.0

Experience

Software Engineering Intern July 2026 – Present
TheProfesseer *Remote*

- Redesigned a legacy Python/SQLite uptime-monitoring system (5+ Indian court sites, 22+ endpoints, 180K+ heartbeat records) into a PostgreSQL-based architecture for a legal-tech data-scraping platform.
- Designed a PostgreSQL schema separating slow-changing configuration data from a high-volume time-series heartbeats table, working through real data-modeling and query-performance tradeoffs.
- Built a two-tier health-check system using PostgreSQL UUIDs, JSONB, partitioned tables, and indexes to support continuous 5-minute polling at scale.

Software Engineering Intern – Java Technology Stack Nov 2025 – Jan 2026
Infosys Springboard *Davanagere, India*

- Built and maintained backend REST APIs within an Agile/Scrum team, working on data-pipeline features end-to-end.
- Reviewed code with the team, documented system-design decisions, and fixed bugs to improve application reliability.

Projects

CarbonLite – Full-Stack Carbon Footprint Tracker | *React.js, Spring Boot, MySQL, REST APIs* GitHub

- Built a React.js frontend that talks to a REST backend to calculate carbon emissions from lifestyle survey data, with a relational schema for users, carbon logs, and goal tracking.
- Implemented authentication and a dashboard with goal tracking and achievement badges, connecting frontend state to backend data models.

Real-Time Log Monitoring System | *Java, Spring Boot, WebSockets, REST APIs* GitHub

- Built a backend with REST endpoints for log ingestion and a WebSocket layer to stream data to a live dashboard in real time.
- Implemented an incident-response flow that rotates encryption keys and clears in-memory logs on trigger, working through how a distributed client-server system stays consistent under live updates.

FakeGuard Pro – Fake News Classifier (Team Project) | *Python, scikit-learn, NLP, Streamlit* GitHub

- Owned the ML pipeline (data preprocessing, TF-IDF feature engineering, Logistic Regression training and evaluation) for a 4-person team NLP classifier that labels news articles as real or fake.
- Evaluated the model using accuracy, precision/recall, and confusion-matrix analysis, with the classifier served through a Streamlit interface for real-time predictions.

Technical Skills

Languages: JavaScript (ES6+), Java, Python, SQL, C
Frontend: React.js, HTML/CSS, Tailwind CSS
Backend: Spring Boot, REST APIs, Spring Data JPA, Spring Security
Databases: PostgreSQL, MySQL, H2
Core Concepts: Data Modeling, Object-Oriented Programming, Data Structures and Algorithms, System Design
Tools: Git, Maven, Postman, Swagger/OpenAPI, Agile/Scrum

Achievements

Problem Solving: Solved 300+ Data Structures and Algorithms problems on LeetCode and GeeksforGeeks
Certifications: Java Foundation, Programming in Java, DSA using Java, DBMS (NPTEL / Infosys Springboard)
