**MOHAMMED SHAAZ**

+91 6282984460 | shaazney123@gmail.com | https://www.linkedin.com/in/mohammed-shaaz-098a1628b/

## TECHNICAL SKILLS

**Languages:** Java, Python, JavaScript, TypeScript, SQL, HTML, CSS

**Frameworks & API's:** React, Node.js, Next.js, Fast API, REST APIs, ETL pipelines, Express.js

**AI & ML:** RAG, FAISS (Vector DB), LangChain, LangGraph, Scikit-learn, Hugging Face

**Cloud & DB:** AWS (EC2, S3), Docker, CI/CD pipelines, MongoDB, MySQL, PostgreSQL, Supabase

## EDUCATION

**Christ college of engineering** Kerala, India

B.E. in Electronics & communication June 2023 - May 2027, GPA: 8.0

Machine Learning (MINOR), English Proficiency: C1 (Advanced), 2x Hackthon Winner

## WORK EXPERIENCE

**Software Engineering Intern | Modelsuite.ai** May 2026 – August 2026

- Built a full-stack team management portal using Node.js, Express.js, and MongoDB (MERN stack), streamlining daily operations and communication tracking for remote agency teams reducing manual workload by 20%
- Scaled a Python-based Instagram/TikTok automation platform using FastAPI, BullMQ, and MongoDB, managing 20+ real devices via ADB with automated job scheduling and execution
- Collaborated within a 10-person engineering team to ship the full automation platform in one month, leveraging AI-assisted development tools (Cursor, Claude, Copilot) to accelerate implementation, debugging, and code review

**AI Evaluation Intern | Caudal AI(Air Dawg Labs)** July 2026 – October 2026

- Contributed 40+ LLM coding-agent benchmark tasks (terminal bench 2.1), analyzing model failures, task difficulty, test coverage, oracle correctness, specification quality, and reproducibility
- Built and improved Harbor-format software engineering benchmarks derived from real-world open-source repositories, focusing on Python/C++/Go codebases, behavioral specifications, automated testing, and reproducible evaluation environments
- Reviewed and improved 20+ software engineering evaluation components across Python, C++, and Go codebases, covering Docker environments, automated testing, Git workflows, and behavioral verification

## PROJECTS

**AutoFlow– Visual Workflow Automation Platform | Github** July 2025 – July 2026

- Built an AI-powered workflow automation platform enabling users to generate and execute workflows from natural language prompts using LLM-based planning, reducing manual setup effort by 70%
- Developed a mobile responsive frontend with Next.js and React Flow, allowing users to visually design, edit, and execute automation pipelines with real-time feedback
- Implemented scalable FastAPI backend with REST APIs, LLM integration, and strict validation pipelines to ensure reliable execution, debugging, and monitoring of automated workflows

**AgentPay- Autonomous Commerce Platform | Github** May 2026 – Sep 2026

- Built an **end-to-end agentic commerce platform** with multi-turn **LLM tool-use** and a **Qdrant vector RAG** layer with agent autonomously queries a 2,100+ item multi-merchant catalog, performs cross-store price negotiation, applies coupons, and executes **0-OTP headless payments** via Razorpay UPI Autopay with a live Telegram bot interface.
- Engineered a production-grade Node.js backend (13+ endpoints, 5-layer cryptographic security — HMAC-SHA256 mandates) with a Next. for real-time order tracking and autonomous payment settlement across 3 storefronts

**MedPrompt– AI Health Assistant | Github** May 2025 – July 2025

- Designed an end-to-end RAG pipeline that ingests uploaded lab reports (PDF/image), extracts key vitals via OCR, generates structured medical summaries, and enables contextual LLM-powered Q&A over parsed documents
- AI health assistant with modular Next.js routing , a FastAPI with XGBoost/Scikit-learn risk prediction serving in real-time
